Methodology

This poll was conducted via a hybrid method of online opt-in panel survey and text-to-web. The survey was completed by Noble Predictive Insights from August 26 - September 3rd, 2025 among n=2,016 U.S. registered voters (± 2.2 MoE), plus multiple state-level surveys conducted in California (n=484 total, ± 4.5 MoE), Florida (n=499 total, ± 4.4 MoE), Illinois (n=490 total, ± 4.4 MoE), New York (n=482 total, ± 4.5 MoE), and Texas (n=400 total, ± 4.9 MoE). The sample demographics were weighted to accurately reflect national/state population by gender, region, age, party registration (California, Florida, New York) or party identification (U.S., Illinois, Texas), 2024 presidential vote recall, race/ethnicity, and educational attainment. Weight targets were sourced from recent voter file data, the Current Population Survey (CPS), and state Secretary of State websites. Totals may not sum to 100%, due to rounding.
